## 8 CH THERMOCOUPLE (J,K,E,N,S,R,B,T) CANOPEN MODULE

ZC-8TC is an interface for Thermocouple sensors (J, K, E, N, S, R, B, T) and generic sensor with mV as standard output signal. The number of input is 8 and each input is independent from each other.

It's a CANopen device and can be connected into a CANopen network. A 6-way galvanic isolation among Power supply // input // RS485 circuits assures the integrity of your datas (each couple of channels is isolated from the other circuits).
